

## Environmental Policy

Grand Gulf Energy is committed to conducting our operations in a responsible manner as to minimise our impact on the environment whilst still allowing our projects to be commercially viable.

Respect for the environment is fundamental to our approach to sustainable development. We will respect the environment by operating responsibly and demonstrating leadership in all aspects of mining in order to be given the ready access the Company will need to people, land, and funds.

We will adhere to all environmental laws and regulations applicable to our operations and where adequate laws do not exist, adopt, and apply standards that reflect our commitment to the environment.

We commit to studying the environmental impacts of our work throughout the exploration, development, and mining cycle, and to implement practices to reduce this impact.

In order to fulfil our commitment to minimise our environmental impact we will:

- Assess the environmental impacts of our activities whilst aiming to be a leader in environmental performance in order to reduce our environmental footprint and meet community expectations to support sustainable development
- Implement systems to reduce our impact on the environment, reduce emissions, increase recycling, and efficient use of energy and water resources
- Ensure environmental impacts are considered during planning and operational processes
- Ensure appropriate information, training, communication, and supervision is provided to all employees, contractors, and suppliers to meet our environmental commitments and responsibilities, thereby ensuring they are informed of and understand their obligations in respect of this policy
- Interact with traditional landowners and value their environmental knowledge
- Rehabilitate areas affected by our operations to a state agreed upon by stakeholders

In implementing this Policy, we will seek the support and involvement of our employees, contractors, suppliers, customers, business partners and communities in sharing responsibility to meet our requirements.

We are committed to working with our community and other key stakeholders to achieve positive environmental, social, and economic benefits.
